

In the regular trend templates you can enter only the end time and date of the trend. This is the way Citect works. If you want to set the start time modify your templates, and you will be able to set the start time as you set the end time. In this project You have some templates to see this functionality.

This is done by adding 2 function that calculate the end time of the graph and set them.

The steps to modify each of the trend templates are:

1. add the functions to your project or include this project to your project.
2. Open the template you want to modify from the "Include" project.

3. Delete the start time and date (Marked by red).
4. Copy the end time and date to the start time and date (Marked by blue).
5. modify the start time according to the following :

6. Change in the "String form" from 0 to 100. Don't change the other arguments.
7. Change the Comment
8. Press "Next" and change the function name, DON'T change the arguments. Change the comment.
9. Confirm the changes.
10. Modify the start Date in the same way
